

FamilyTree**DNA**
Certificate – Haplogroup

Family Tree DNA certifies that a DNA sample from

Mr. ANTONIO FLORENTINO

Sample # 214911

was analyzed for Haplogroup determination using the Single Nucleotide Polymorphism test. The analysis shows that you are positive for the following SNPs: Z1704+ U174+; and negative for the following SNPs: P9.2- P116- P115- P113- L372-. According to the current classification, you have been assigned to:

Haplogroup E1b1a7a

Haplogroup E1b1a is an African lineage. It is currently hypothesized that this haplogroup dispersed south from northern Africa within the last 3,000 years with the Bantu agricultural expansion. E1b1a is also the most common lineage among African Americans. It is an old, diverse haplogroup with many branches and is found distributed throughout Africa today. It is also found at a very low frequency in North Africa and the Middle East.
